

BRIDGE WALK

Area 3 and 6 consist of enhancements to the New and Old Bridge. As part of a larger lighting scheme to link the River Walk on both sides and restore focus to the river as an amenity in Trail, it is recommended that the New and Old Bridges be illuminated. The use of flood lights mounted at the deck of the bridge, aimed upward at the structure will highlight the character of the bridges and bring visual interest to them as landmarks in the City. Illuminated in conjunction with the retaining wall of Area 1, the bridges will complete the north and south River Walk edges. The illumination of the bridges will reinforce the image of the River Walk connecting across the river and give an identity to the bridges as civic landmarks. Enhancement of the pedestrian walk way would include the upgrading of the walking surface as well as a possible widening of a portion of the walkway to provide space for rest point seating and scenic outlooks.
